

## Non-Invasive Trauma Recovery Virtual Reality Platform

Harvard MedTech's Vx Therapy<sup>®</sup> is an adjunctive virtual reality-based platform designed to reduce the effects of trauma including pain, anxiety, depression, sleep disruption, and PTSD-related symptoms.

Both physicians and patients report a 96% satisfaction rate with Vx Therapy.

Over 4,500+ patients—including 2,500+ veterans —have utilized Vx Therapy.

A recent population of nearly 1,400 patients reported significant improvements in their symptoms.

	<b>PROMIS Anxiety</b>	↓ <b>45%</b>
	<b>PROMIS Depression</b>	↓ <b>56%</b>
	<b>PROMIS Pain Interference</b>	↓ <b>50%</b>
	<b>PCL PTSD</b>	↓ <b>26%</b>
	<b>Nightly Sleep Quality</b>	↑ <b>37%</b>
